Pure Earth at a glance

Established	2022, in Uganda
Based in	Luzira, Nakawa, Kampala, Uganda
Works with	Young people, women, schools, local communities and marginalised groups
Reach	Over 100 young people engaged and trained in environmental action

We see waste as a place to begin.

At Pure Earth, we see waste not simply as an environmental problem, but also as an opportunity for innovation, entrepreneurship and sustainable development.

Pure Earth Organisation Uganda is a Ugandan environmental and sustainable development organisation established in 2022, committed to advancing environmental conservation, sustainable waste management and community-led climate action.

We believe that environmental challenges require practical, inclusive and innovative solutions. Our work focuses on transforming waste into valuable resources, promoting responsible environmental practices and empowering communities to help build a cleaner, healthier and more sustainable environment.

Through community engagement, environmental education, plastic waste recycling, skills development and strategic partnerships, we work with young people, women, schools, local communities and marginalised groups to create opportunities for environmental sustainability and improved livelihoods.

Our vision

A cleaner, greener and more sustainable planet where communities live in harmony with the environment.

Our mission

To promote sustainable waste management, environmental conservation and inclusive community development through innovation, education, partnerships and practical environmental solutions.

Innovate. Sustain. Transform.

What we work on

Five connected areas, all aimed at the same outcome: communities that protect their environment and benefit from doing so.

Sustainable waste management and plastic recycling

We promote responsible waste management, plastic collection, recycling and waste-to-value initiatives that reduce pollution while creating opportunities for resource recovery and green entrepreneurship.

Climate action and environmental conservation

We support community-led climate action through environmental awareness, conservation initiatives, climate education and practical interventions that build environmental resilience.

Environmental education and community engagement

We engage schools, young people and local communities through environmental education, school environmental clubs, awareness campaigns and community clean-ups.

Youth and women's empowerment

We equip young people and women with knowledge, practical skills and opportunities to take part in the green economy, environmental entrepreneurship and sustainable livelihoods.

Inclusive environmental development

We promote the participation of persons with disabilities and other underserved groups, because sustainable development must be inclusive and accessible to everyone.

How we work

Five principles guide every project we take on.

Innovation

Developing practical and locally relevant solutions to environmental challenges.

Community participation

Placing communities at the centre of environmental decision-making and action.

Sustainability

Promoting solutions that deliver lasting environmental and social benefits.

Inclusion

Ensuring that young people, women and marginalised groups have opportunities to participate.

Partnerships

Working with schools, civil society organisations, local governments, development partners and other stakeholders on shared environmental goals.

Our work so far

Some of it we lead ourselves. Some of it we do alongside partners. All of it happens with communities and schools.

September 2023	Community climate adaptation outreach with partners during the UN General Assembly
October 2023	Early plastic bottle dustbins take shape
November 2023	Recycling messages in the community and at Murchison Bay Primary School
February 2024	Climate lessons and tree planting with primary school pupils
June 2024	Upcycled bottle planters and decorative pieces on display
April 2026	Bottle dustbins delivered to Kayunga Mixed Primary School with TARD Foundation and Gufasha Girls Foundation
June 2026	World Environment Day commemoration at Masulita Parish
October 2026	A bottle dustbin on stage at the 3rd CEO's Breakfast Meeting and High-Level Dialogue

April 2026, Kayunga Mixed Primary School

A dustbin made from the waste it collects

The Pure Earth Innovation Hub turns used plastic bottles into dustbins, then puts them where children will use them every day.

Every bin is a lesson you can walk past. It is built from used plastic bottles, so pupils can see exactly what a discarded bottle can become.

In April 2026, in partnership with TARD Foundation and Gufasha Girls Foundation, we took the bins to Kayunga Mixed Primary School. Each one carries a simple notice: Dump. Keep our environment clean. Use it. Respect it. This dustbin is made from plastic bottles.

Pupils, teachers and our team gathered behind signs that carried the message further: There is no Plan B. I am a climate educator. Clean air = stronger lungs. Green school = a happy planet.

In partnership with TARD Foundation and Gufasha Girls Foundation.

Signs and a finished bottle dustbin at Kayunga Mixed Primary School.

Dump. Keep our environment clean. Use it. Respect it.

The notice carried by each bin.

Next step: more schools. See "Bottle dustbins for more schools" among our funding priorities on page 19.

Blue and black bottle planters on display, June 2024.

Waste to value

From bottles to bins and planters

What others throw away becomes something people want to keep. That is the idea behind our waste-to-value work.

Our earliest bins were made from green and clear bottles fixed around metal rings, using material that was already lying around.

Women now build taller bins around wooden frames, adding row after row of bottle mesh until the frame is covered. It is practical work that people can learn together.

By June 2024 the same bottles were also becoming planters and decorative pieces, displayed alongside painted tyre planters. Each piece shows that plastic waste can be turned into something of value.

Building a bin on a wooden frame.

1
Collect used bottles.

2
Build them around a ring or wooden frame.

3
Put the finished bin or planter to work.

February 2024, with Climate Justice Crew

Lessons under the tent, trees in the ground

We start with a conversation about climate, then hand pupils a seedling so they can act on it the same day.

The day began under a large tent. Pupils filled the benches while facilitators worked through climate and environment topics at the blackboard and took questions from raised hands.

Then everyone went outside. Seedlings arrived in the boot of a car, and small groups of pupils dug, planted and watered trees around the compound with facilitators kneeling beside them.

Planting in small groups means every child touches the soil, and every class has a tree to look after once the visitors have gone.

Each group plants its own tree.

Seedlings arrive by car.

Facilitators lead each session.

Every child touches the soil, and every class has a tree to look after.

Handwritten messages on a community road, November 2023.

November 2023

Today, recycle for a better tomorrow

Some of our most direct campaigning is done with marker pens, paper and a walk through the neighbourhood.

In November 2023 young people carried handwritten messages along community roads: Recycle more plastic wastes. Use it up, wear it out, make it do or do without. Today, recycle for a better tomorrow.

The same day we were with pupils at Murchison Bay Primary School, close to our home in Luzira. Earlier that month another young campaigner summed up the whole approach on a single sheet of paper: Refuse, reduce, re-use, repurpose, recycle plastics.

At Murchison Bay Primary School.

Refuse, reduce, re-use, repurpose, recycle plastics.

September 2023, with Plus One Tree and Agape Earth Coalition

Taking climate adaptation to the village

While world leaders met at the UN General Assembly, we joined partners in a rural community to talk about what climate change means at home.

A community meeting under the trees.

Women, men and children sat together under the trees for a community meeting, while our team and partners moved through the village with a megaphone and placards.

The messages were direct: The one way of tackling climate impacts in Africa is through adaptation. There is no climate justice without loss and damage finance.

Tree planting tied the day together under a line shared from the visit: Plant a tree, save the generation.

June and October 2026

Carrying the message to decision makers

Change also needs people in the room. In 2026 the message reached a high-level stage and a parish commemoration.

At the 3rd CEO's Breakfast Meeting and High-Level Dialogue on Green Economy, Sustainability and SDGs, schoolgirls walked on stage with brooms, a seedling and a bottle dustbin, putting a practical waste solution in front of business and policy leaders.

On 7 June 2026 we joined the World Environment Day commemoration at Masulita Parish, standing with communities and other organisations for environmental justice.

World Environment Day, Masulita Parish, 7 June 2026.

Our team

Behind every bin, tree and lesson is a team that shows up, works with teachers and community leaders, and comes back.

Who we work with

Our projects are stronger when they are shared. We run some of our work ourselves and deliver other work jointly with organisations and schools, including:

- TARD Foundation
- Gufasha Girls Foundation
- Climate Justice Crew
- Plus One Tree
- Agape Earth Coalition
- Kayunga Mixed Primary School
- Murchison Bay Primary School

Why partner with Pure Earth

Practical results

You can see, touch and visit the outcome: a bin in a school, a tree in the ground, a skill in someone's hands.

Local solutions

Our products use materials that communities already have, and our team is based in Kampala, close to the people we serve.

Reach through schools

Schools carry messages home. Working with pupils reaches families and neighbours too.

Inclusive by design

We promote the participation of young people, women, persons with disabilities and other underserved groups in everything we do.

Fund the work

We have shown what works at small scale. Your support helps us reach more schools and communities. These are our current funding priorities.

Bottle dustbins for more schools

Materials, transport and signs to bring dustbins and waste-sorting lessons to more schools.

School environmental clubs

Starting and supporting clubs, with learning materials, clean-up tools and trained facilitators.

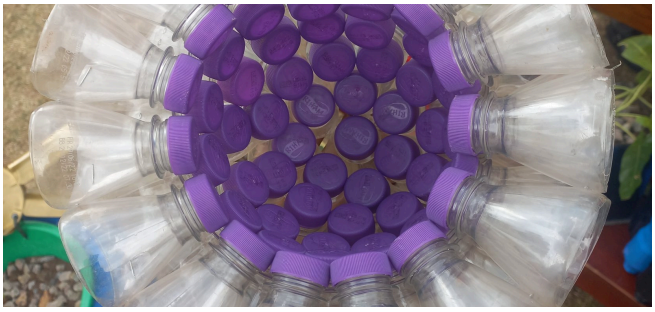

Trees for schools

Seedlings, watering equipment and follow-up visits, so planted trees survive and grow.

Green skills for youth and women

Hands-on training in making and selling recycled products, plus starter tools for new green enterprises.

The Pure Earth Innovation Hub

Workspace, tools and equipment for collecting plastic and developing new waste-to-value products.

Inclusive access

Adapting training and activities so that persons with disabilities and other underserved groups can take part fully.

Tell us which priority interests you, and we will prepare a costed proposal for your review.

Help us reach the next school.

Fund a project
Support one of our funding priorities, in full or in part.

Sponsor a school
Bring bins, trees and an environmental club to a school you care about.

Donate equipment
Tools, seedlings, transport or workspace all go directly into the work.

Share your skills
Volunteer your time, or lend technical, business or communications expertise.
